DETAILED ACTION

Page 2

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.
- Claims 1 and 3-10 are rejected under 35 U.S.C. 102(a) as being anticipated by Schneider (6,286,734). Schneider discloses a clothes hanger with a pants holding device for fixing a pair of pants to a transverse support of a hanger. The device connects the ends of the hanger and has a middle reinforced region. In column 5, lines 35-43 Schneider states that the device may be formed as an injection-molding part of plastic, which would make the device entirely plastic. With respect to Claim 3, FIG.2 shows the spring elements protruding into the reinforced middle region. With respect to Claim 4, FIG.3 shows a close up view of the aperture angle for the spring element to connect to, which is said to be preferably between 20 degrees and 80 degrees. With respect to Claim 5, each side of the clamping device has a joint element for articulated connection to the sides of the hanger. With respect to Claim 9, the device can be made in a single operation by injection molding. With respect to Claim 10, the device is capable of being made as a one-piece injection-molded part.

Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

4. Claims 6-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Schneider (6,286,734). Schneider essentially teaches the invention of the instant application, but fails to specify that the plastic that makes up the device be one of the plastics in the groups recited in Claims 6-8. With respect to Claim 6, POM plastic, polycarbonate, or impact resistance modified polystyrene are all suitable types of well-known plastics which would be within reason to use in making something which that requires the use of plastic. With respect to Claim 7, glass fiber reinforced plastic is also well-known and would be within reason to use in making something that simply requires the use of plastic. With respect to Claim 8, amorphous plastic is well-known also and would be within reason to use in making something which simply requires the use of plastic.

Allowable Subject Matter

5. Claim 2 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
